

The News from MarineSafety ...

MSI LAUNCHES UNIQUE NEW WEBSITE

LaGuardia Airport, NY (November 15, 2007) - Dr. Gene Guest, Director of MarineSafety International announced the launching of a new website designed to provide easy access to information on the capabilities and activities of its maritime simulation centers and its headquarters' staff. In addition to a convenient index, the site provides a breakdown of MarineSafety's major business areas. The double-tier navigation approach provides the user with detailed information rearranging from course descriptions to complete technical papers.

According to Dr. Guest this site is exciting because of its unique approach in providing easy access to a great mass of information. The site provides information and photos which can be easily accessed and downloaded if desired.

MarineSafety International operates a simulator center in Newport, Rhode Island, which provides both commercial training courses and research capabilities. The staff at Newport is capable of assisting port engineers in testing the feasibility of various channel and terminal designs.

Dr. Guest said: "I hope everyone will take the time to checkout this amazing example of information retrieval at www.marinesafety.com."

MarineSafety International has been providing ship handling training to the commercial maritime industry, and the United States Navy since 1974. MarineSafety owns and operates a Simulator Learning Center in Newport, Rhode Island. The Center utilize the latest state-of-the-art simulation techniques to provide a realistic decision-making environment without real-world risks. Its roots trace back to the early 1950's when its parent company, FlightSafety International, began training commercial airline pilots with simulators.

FlightSafety International is the world's premier aviation training organization. Over 75,000 pilots, technicians and other aviation professionals train at FlightSafety facilities each year. The company designs and manufactures full flight simulators for civil and military aircraft programs and operates the world's largest fleet of advanced full flight simulators at 40 training locations.

MarineSafety International is ISO 9001:2000 certified. Its Quality Management System is applicable to the design, development, and conduct of simulator-based training and research for the maritime industry.
